Jahaan Suthar

Software Engineer | B.Tech Computer Science and Engineering, VIT Chennai (2028)

jahaansuthar@gmail.com | Chennai, India

linkedin.com/in/jahaan-suthar-648320320 | github.com/TheRealJahaan

EDUCATION

Vellore Institute of Technology, Chennai 2024 – 2028

B.Tech in Computer Science and Engineering CGPA: 8.38 / 10

EXPERIENCE

Software Development Intern, Wipro × InspireLeap May 2026 – Present

- Solve Python programming assignments built around core data structures and algorithms, with a focus on clean, readable code.
- Build small, modular Python applications in the program's hands-on modules.
- Work through algorithmic problem sets with peers, comparing approaches to improve time and space complexity.

PROJECTS

Steward Crew – AI agents that triage open-source contributors, with a human in the loop Nov 2026

Python, SQLite, GitHub REST API, WebSockets, Claude Code, Discord, Slack

github.com/TheRealJahaan/steward-crew | dev.to write-up | 3-min demo

- Built **3 AI agents** across Discord and Slack for the Flip the Switch hackathon (WeMakeDevs): one answers newcomers from the real codebase, one writes maintainers a daily triage of claims and PRs, and one drafts PR reviews.
- Designed the safety model so no AI can act on GitHub: agents only file proposals, and a plain-Python "Ledger" service holding the only GitHub token acts only after a maintainer types *approve*, with a full audit log and *undo*.
- Encoded project rules (one open claim per newcomer, claims stale after 48 hours, PR spam checks) as deterministic Python driven by a YAML policy, over a shared SQLite store; **~2,800-line** package with **32 pytest tests**.

BizFlow – GST invoicing and cash-flow platform for small businesses Mar 2026 – Apr 2026

TypeScript, React, Next.js, Node.js, Express, PostgreSQL, JWT, Razorpay | github.com/TheRealJahaan/bizflow

- Developed a monorepo with a Next.js / React dashboard and an Express REST API on PostgreSQL (pooled connections, indexed foreign keys) for invoices, payments and business records.
- Wrote a shared GST engine package that computes CGST + SGST for intra-state and IGST for inter-state invoices, and generates UPI QR codes for payment.
- Secured the API with JWT authentication and role-based access control, and verified Razorpay payment webhooks with **HMAC-SHA256** signatures.

URL Shortener REST API Jun 2026

TypeScript, Node.js, Express 5, Zod, SQLite, Vitest, Docker, GitHub Actions | github.com/TheRealJahaan/BAckENd

- Implemented a REST API for short links with JWT auth, custom slugs, expiry and click analytics; visitor IPs are stored only as salted SHA-256 hashes.
- Validated every request with Zod schemas that also generate the OpenAPI 3.1 docs; added rate limiting, security headers, structured logging and health checks.
- Wrote **46 unit and integration tests (~95% coverage)**, each on a fresh in-memory database, run in GitHub Actions CI; packaged as a Docker image.

DJ Cartel – multi-vendor e-commerce store Apr 2026

React (Vite), Node.js, Express, Prisma, JWT | github.com/TheRealJahaan/DJ-Cartel

- Developed a React storefront with product catalog, cart and wishlist (Context + reducer state) and Google sign-in, backed by an Express REST API with Prisma and JWT-protected cart routes.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++, Swift, HTML, CSS

Frameworks: React, Next.js, Node.js, Express, Prisma, Zod, SwiftUI

Backend and databases: REST APIs, JWT authentication, OpenAPI, WebSockets, PostgreSQL, SQLite

Tools: Git, GitHub, GitHub Actions (CI), Docker, Vitest, pytest, Claude Code, Xcode

Fundamentals: Data structures and algorithms (LeetCode solutions in Java), MVVM
